

Set the State Events to 'Toggle'

Set the Y Button Press Operators to disable the normal action upon pressing it (Bail Out) and then link the 'On Press' option to the State Event next to it.

Set each Colour Change Event to the different colours you want to toggle through.

Each State Event is then linked to the Y Button Press next to it, and the one on the row above.

Make sure only the bottom Y Button Press has the 'Enabled' checkbox checked

You can copy this upwards for as many colours as you wish to toggle between, as long as the top state event is linked to the bottom Y Button Press.
